*****Employee ERP System*****
*****
```

Hello,

ERP is a business process management software that allows an organization to use an integrated application system to manage a business and automate many back office fee tasks.

In this project the admin will be able to add, update and delete the details of the employees.

The admin can also add a new employee and customer project and view employee details.

As well as the employee can sign in to their own account and update their daily work.

-----  
Which technology is used ?  
-----

- PHP(CodeIgnitor Framework)
- MySql
- HTML5
- CSS3
- JavaScript

-----
